Description

A web application which allows faculty or teaching staff to save time in generating authentic assessments based on competency statements. Note that this new application is customised to SIT context.

Use Cases (General)

• Get suggestions of authentic assessment for hurdle and other assessments and make variations of them based on competency statements, and breakdown of Knowledge, Skills, Abilities to be assessed.

• Import an existing assessment and analyse it with the intended competencies to be tested, to improve on them and make variations of it.

Use Cases (SIT examples)

• Create authentic assessments and make variations of them based on competency statements for multiple attempts in CBE modules.

• Take in existing assessments and convert them to authentic assessments for CBE modules, as well as make variations of them for multiple attempts.

Access Information (SIT)

• Go to the https://assessmentaid-1020620751554.us-west1.run.app/

Click on Sign up, put in the necessary information.

Email to Karen.wong@singaporetech.edu.sg to inform that you have signed up.

Wait for approval.

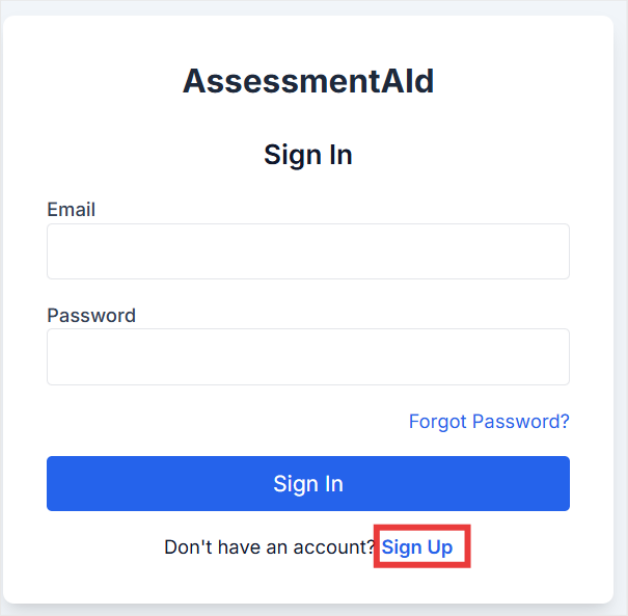

Support Contacts

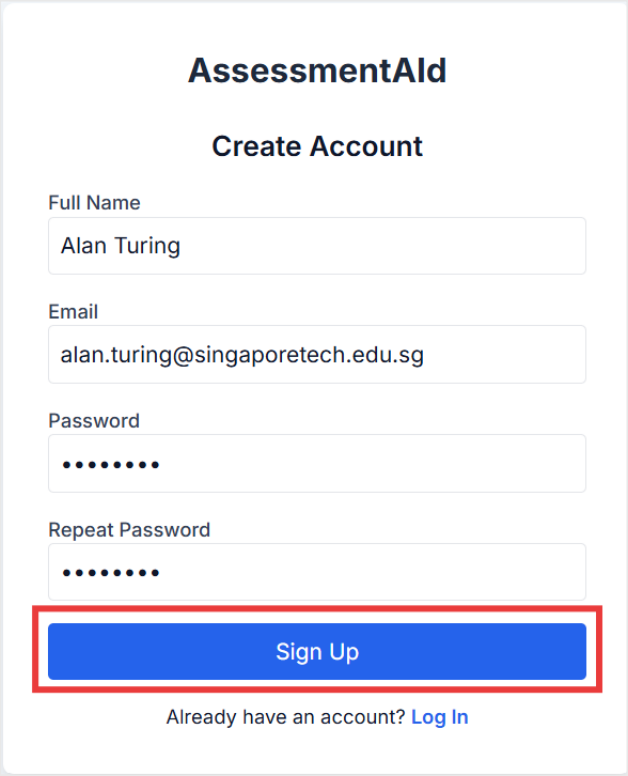

• Contact EDs of respective Clusters for more information on the used cases.

• For access or technical issues, contact Karen (karen.wong@sngaporetech.edu.sg)

How to Sign up?

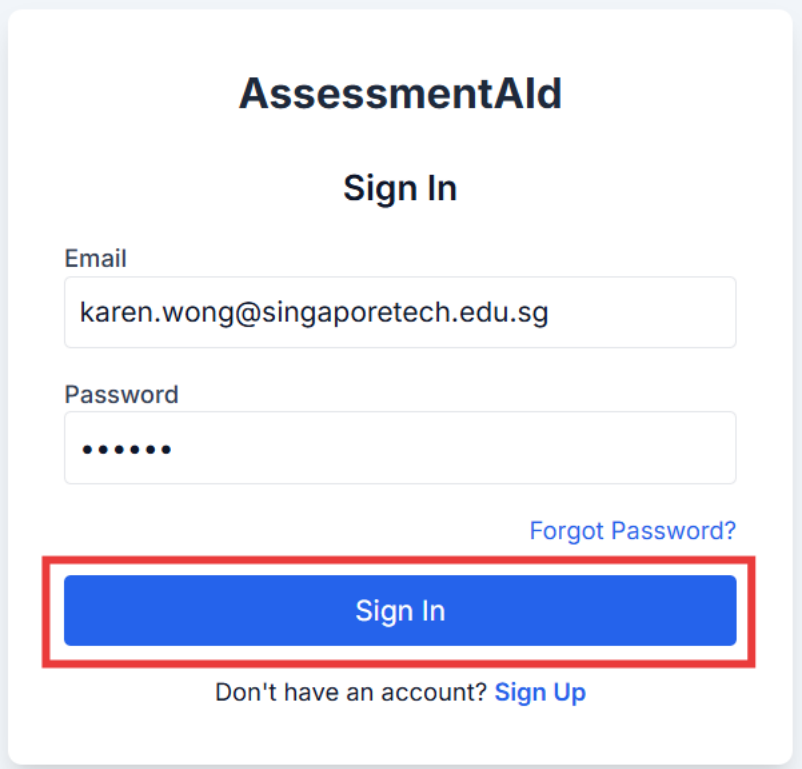

- Go to the https://assessmentaid-1020620751554.us-west1.run.app/.
- Click on Sign up (see image below)

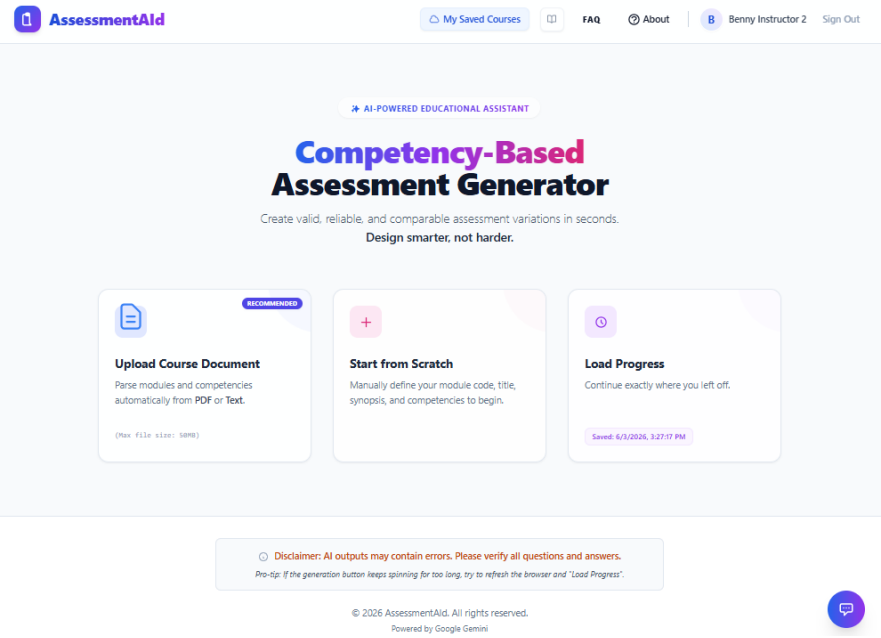

- Email to Karen.wong@singaporetech.edu.sg to inform that you have signed up.
- Wait for approval.

How to Log in?

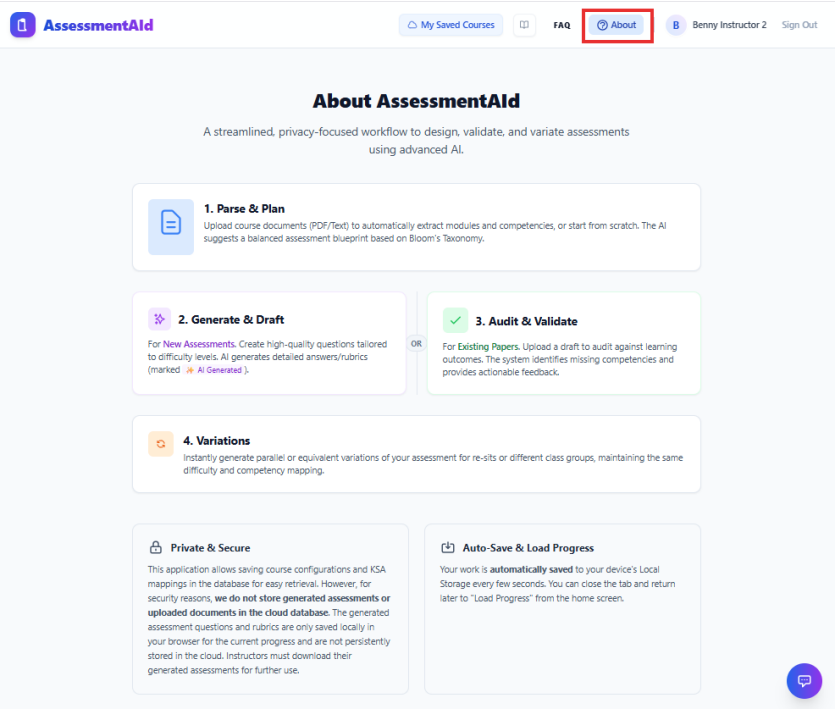

How to get started?

After logging in, you will come to the landing page of AssessmentAId.

If it is your first time visiting the web app, you can click on the “About” button on the top right of the web application to find out more about this tool. Click on it to toggle to homepage. There is also a FAQ on the top menu.

You can try out the beta AI Chatbot on the bottom right to ask questions on AssessmentAId.

How to load in your module names, synopsis & competencies (Learning Objectives)?

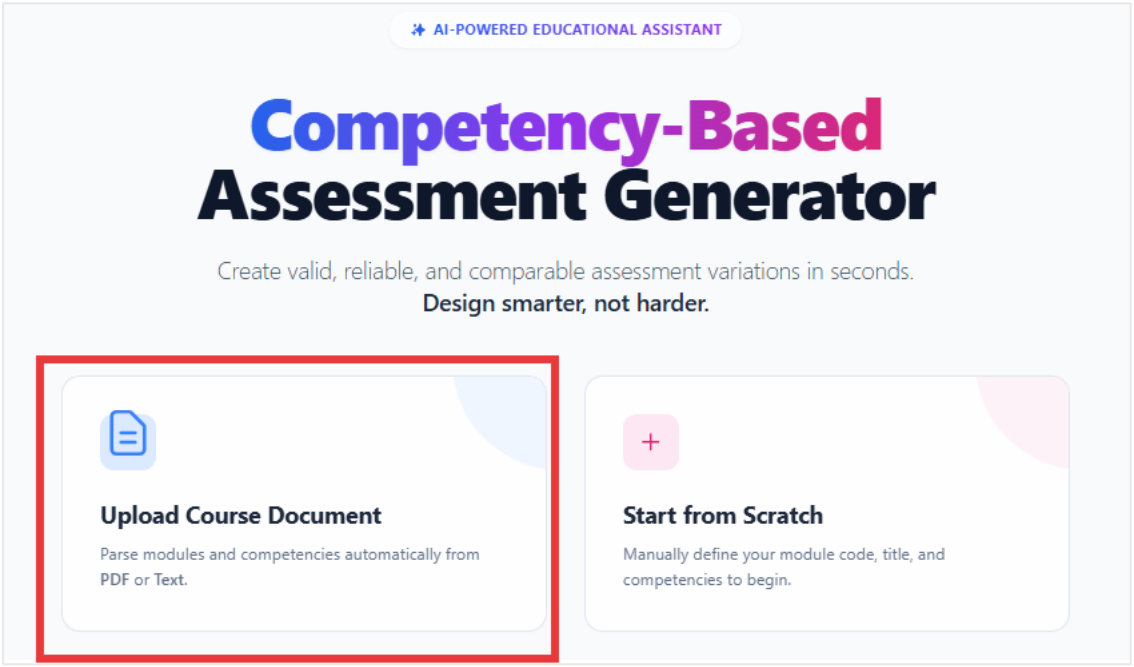

To give AssessmentAId the context, it is necessary to include the module name(s), synopsis and competencies or learning objectives. You can try uploading your module profile or Micro-credential profile in pdf file. Edit the extracted information if needed.

Pro-tip: If you find that the extraction of the pdf does not work very well (in the case where there are a lot of other information in the pdf file), it is recommended to copy out the necessary information to a text file to upload it. The text file should include the names, synopsis or description & competencies or Learning Objectives of your modules (e.g. Multiple modules in a Microcredential) or just information for just one module, you can put them into a text file and upload it to the AssessmentAId to get started.

Here is an example of how the extracted text file looks like.

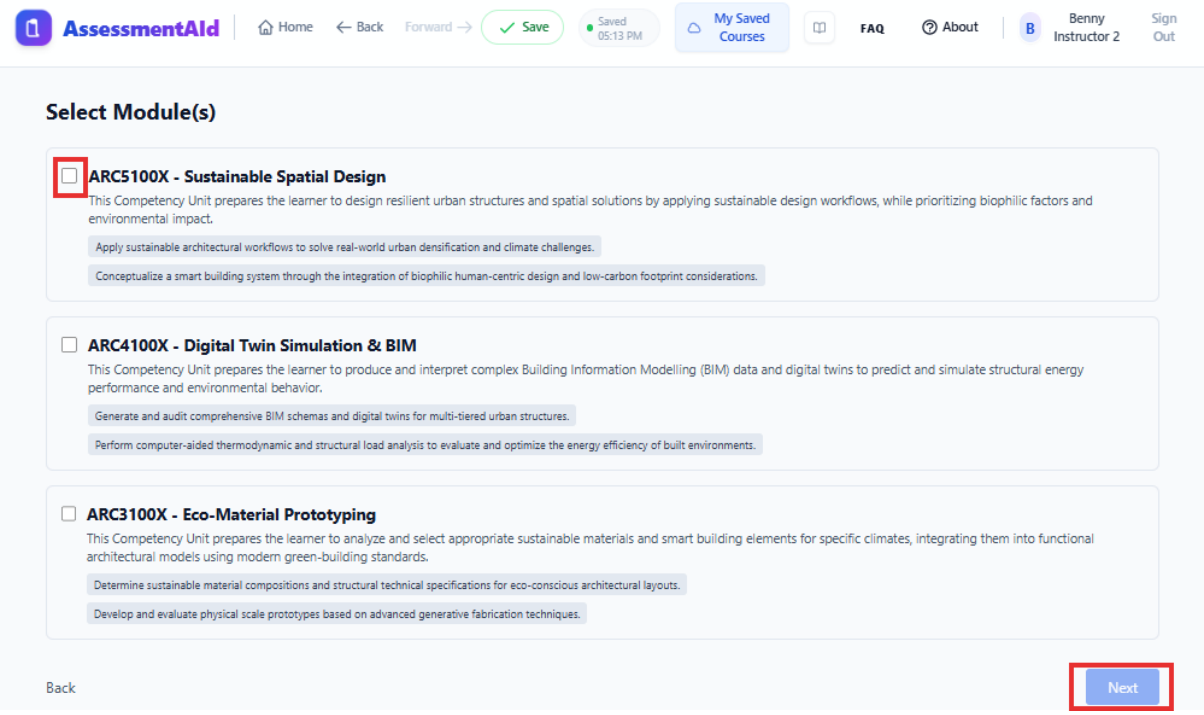

Example of MC info.txt

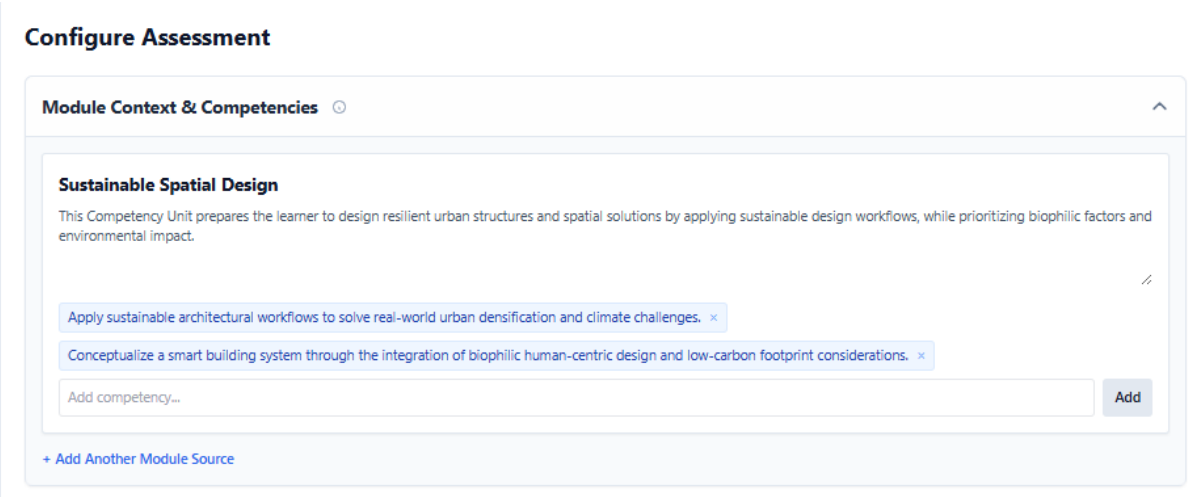

However, if you want to start from scratch, you can click on the “Start from Scratch” option on the top right. Then it is also possible to copy and paste your module information on the web app. The rest of the steps are the same.

E.g. after uploading the text file with the module information, choose 1 or more modules to be used to generate the assessment. Click on “Next” button at the bottom right.

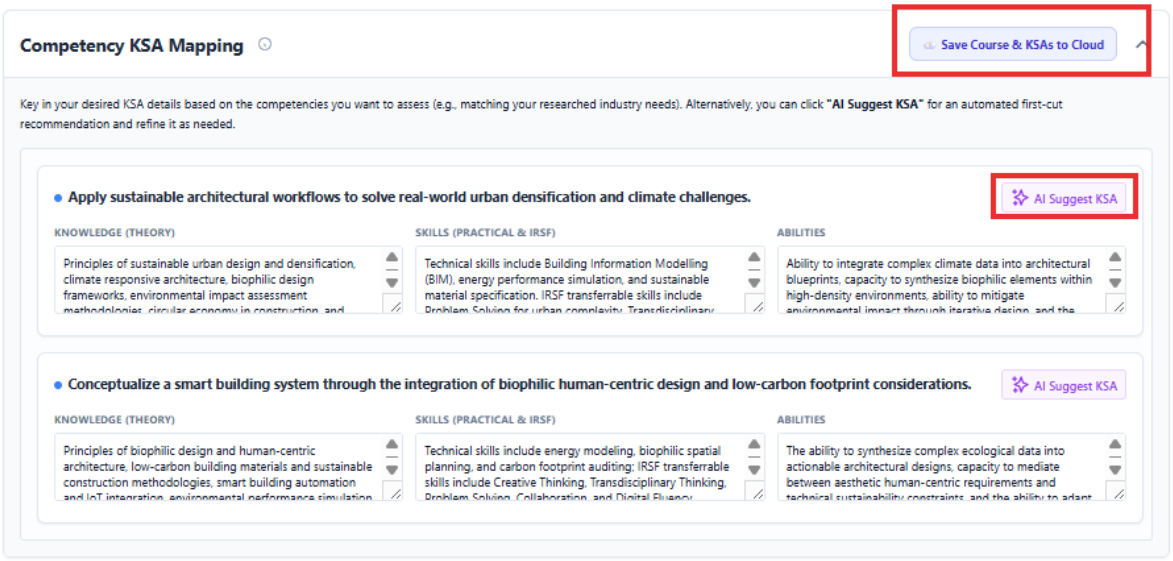

Check that your module info is accurately captured. Edit if necessary.

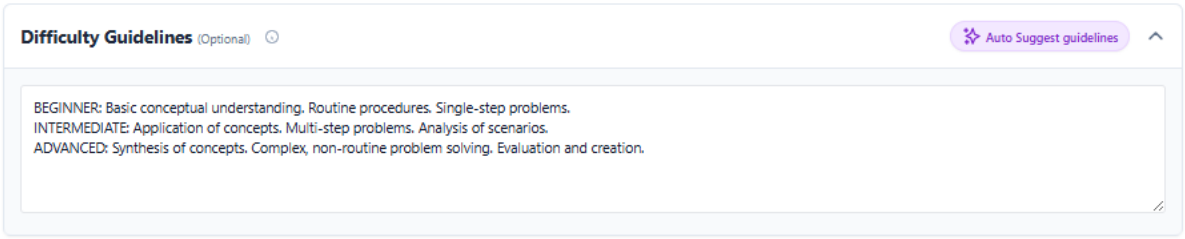

Populate the KSA (Knowledge, Skills and Abilities) as context for the AssessmentAId

Note that it is also possible to get a first cut suggestion from the AI by clicking on the “AI Suggest KSA” button. Edit as desired. Click on Save Course & KSA to Cloud for easy retrieval next time. IRSF is SIT’s Industry Ready Skills Framework and the transferrable skills are included into the AI to get suggestions on the relevant ones for the assessment generated.

Edit Difficulty Guidelines if desired (Optional)

3 Choices of generating Assessments

There are 3 possible ways to use the AssessmentAId.

1. If you do not have an existing Assessment or you want to start designing the assessments from scratch based on the competencies, you can choose to use the Strategic Planner (more for CBE courses to design a hurdle and other assessments assessment for each competency)

2. If you are not teaching a CBE course or looking to generate assessments for quiz, class activities, or project, you can go for Manual Configuration to more controlled settings of assessments.

3. If you have an existing Assessment to begin with, you can click on Import existing Assessment option. It will allow you to choose the competency you intended it to, analyze it with AI for suggestions on how to improve.

All these options will allow you to create multiple variations of the assessments.

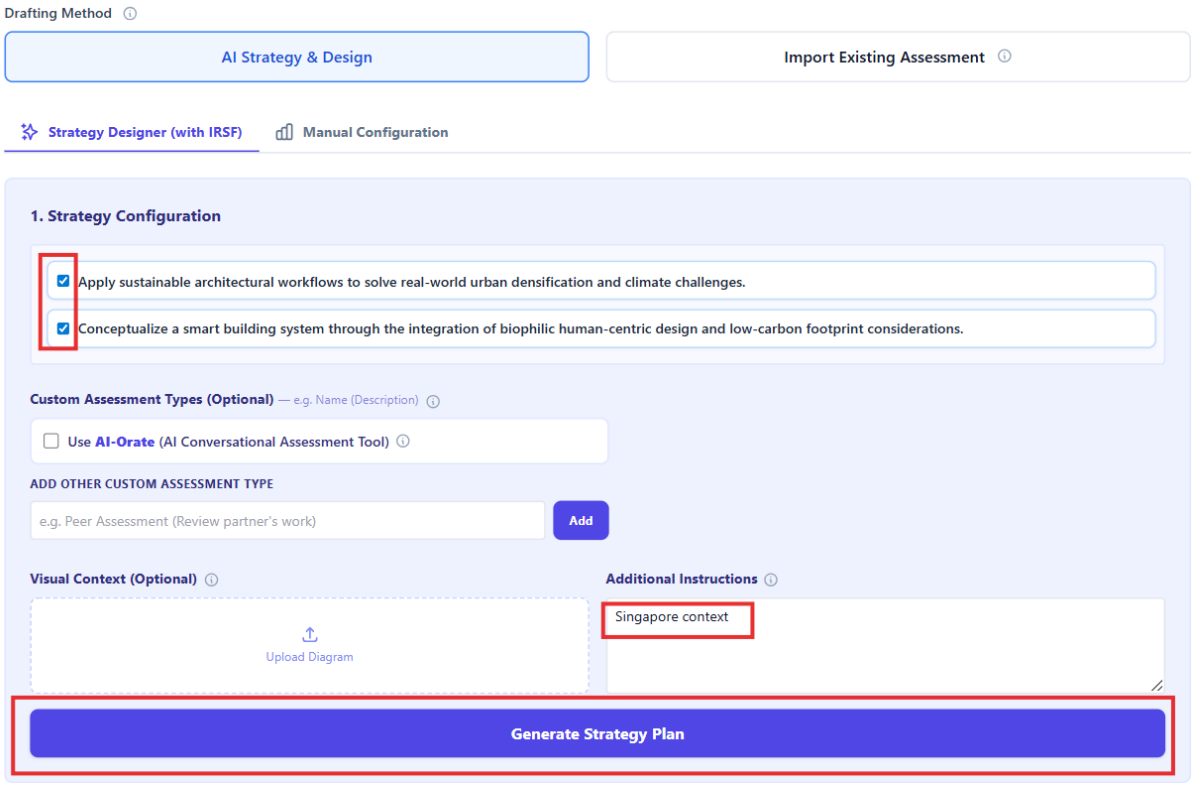

How to use the Strategic Designer?

Choose AI Strategy & Design > Strategic Designer (with IRSF)

See image below. Choose 1 or two of the competencies with the checkboxes.
Put in Custom Assessment and some descriptions if you want the AI to consider them.

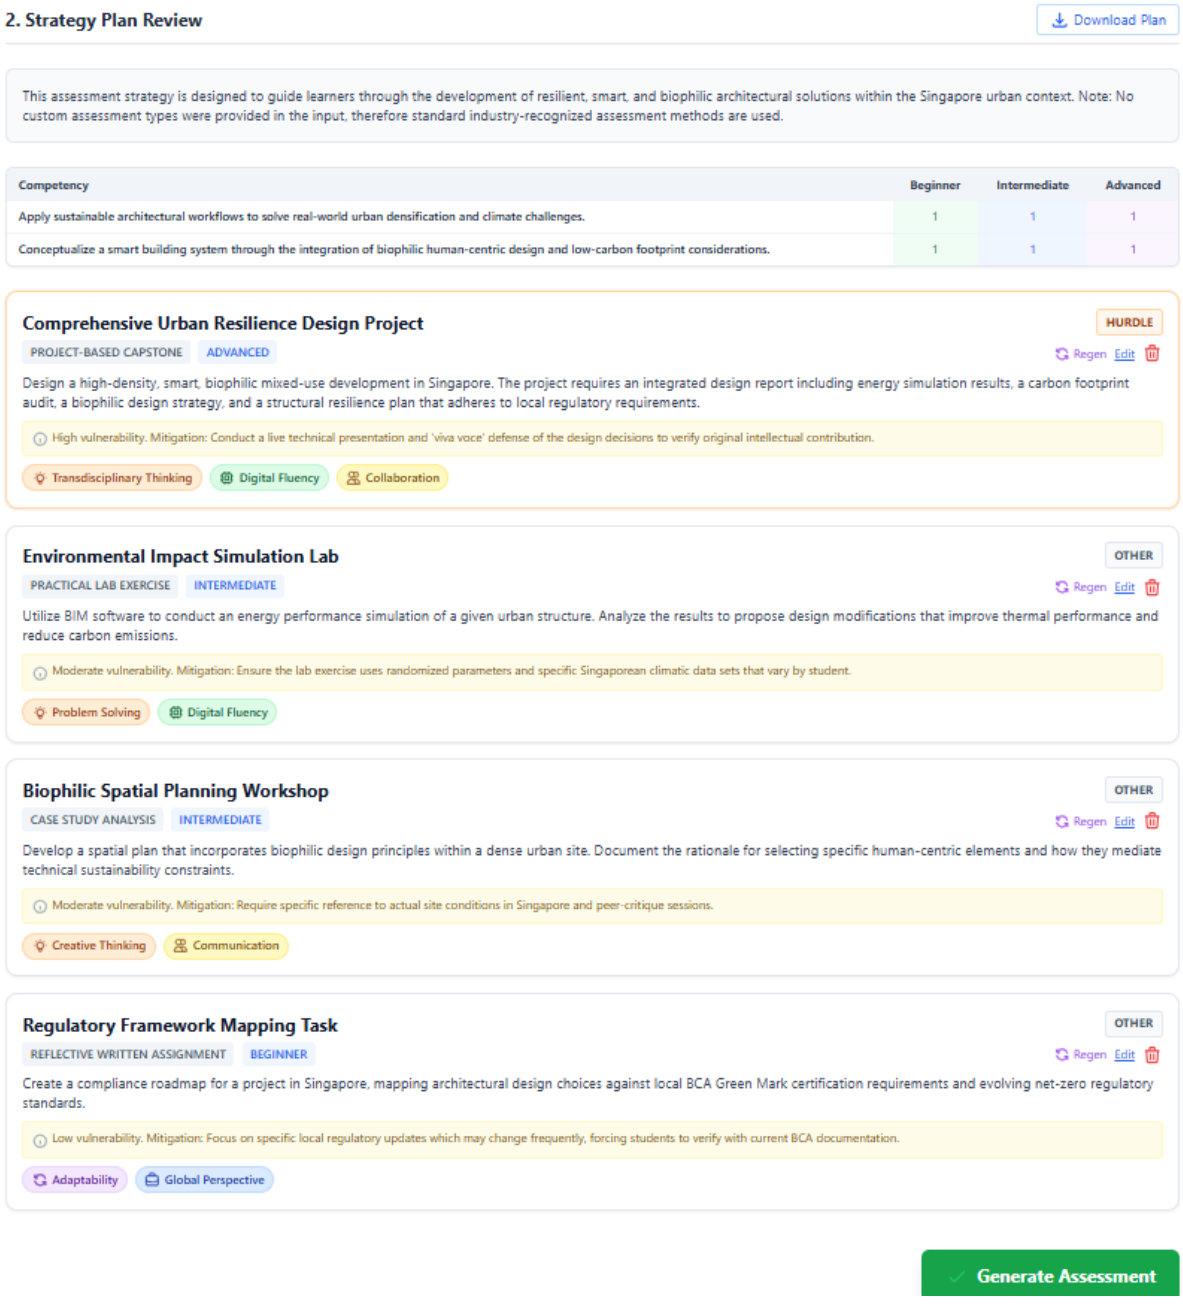

Visual Context and Additional information are optional. The AI will use these to shape the assessment. E.g. an Additional Information could be “Singapore Context” etc.

Click on the Generate Strategy Plan.

Review the Strategy Plan and make edit if necessary.
By default there is one hurdle (usually more advanced level) assessment, and 3-5 other assessments which are like scaffolding or supporting ones to assess the building of the competencies. Refer to the suggested gen-ai vulnerability alert for assessment for consideration on how to AI proof the assessment. Please use your discretion as the AI generated suggestions may not be error-free.

Note: The Competency Difficulty level matrix table tabulates the number of assessment questions with the respective difficulty levels.

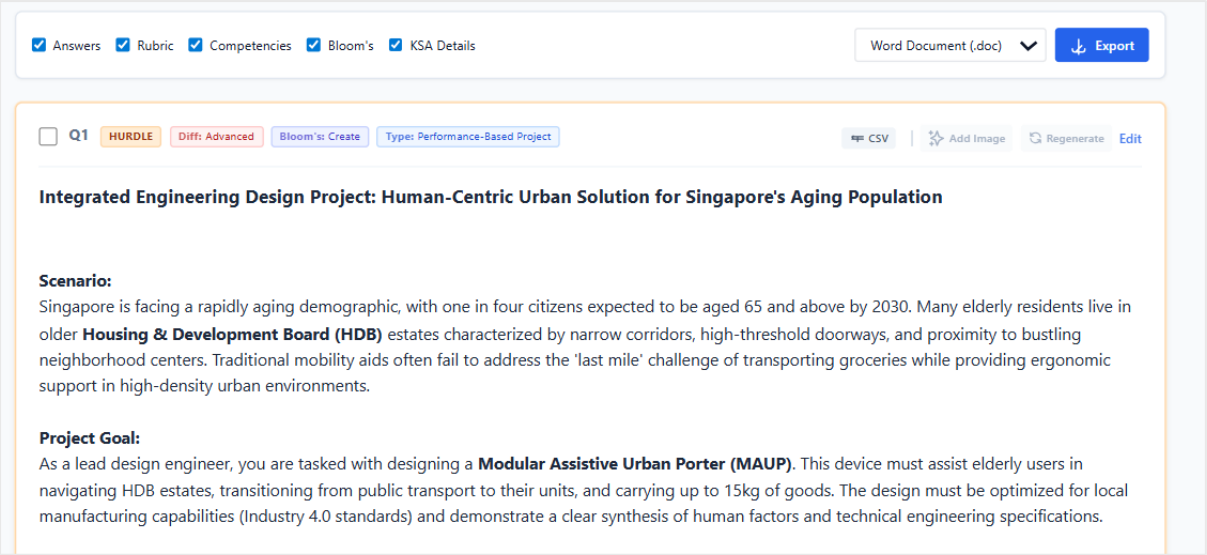

After reviewing, click on the green “Generate Assessment” Button.

Pro-tip: Sometimes, this part might hang. If the green button shows a spinner that goes on for too long, you can try to refresh the browser. It is most likely that the questions are already generated.

Review the questions generated for the assessments.

Note that it is possible to “Add Image”, “Regenerate” or “Edit” the assessment questions. Note that Images are GenAI-generated and not recommended for technical drawings.

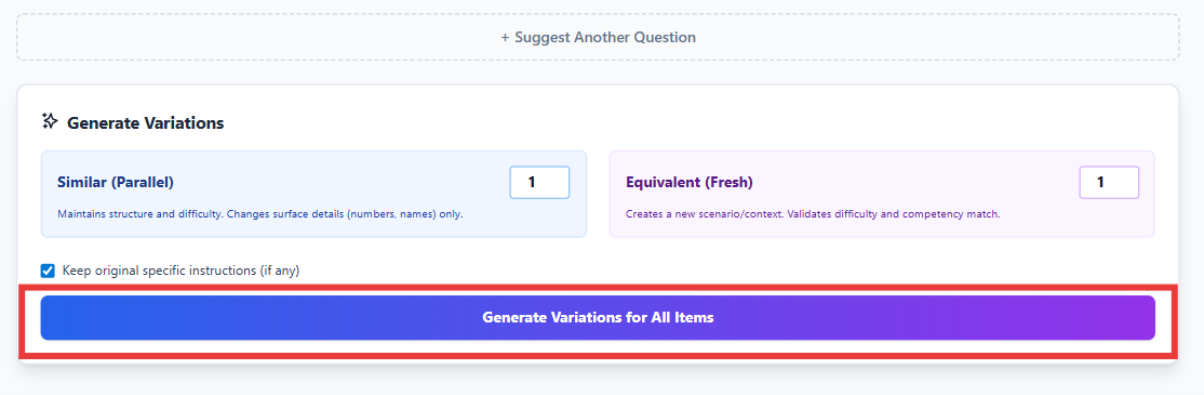

It is possible to export the assessment questions in Word document or csv for further editing. Note that it is a good practice to download the questions as the generated questions are only saved in the local storage of your browser. If you clear the cache, the generated questions will be gone.

How to generate Variations for the assessment?

It is possible to generate Similar or Equivalent variations of the assessment.
For similar, it will be more similar to the first generated or imported assessment in types of questions, difficulty and competencies tested. Equivalent variation could differ in the question types but will keep to the difficulty and competencies tested as the first generated or imported assessments.

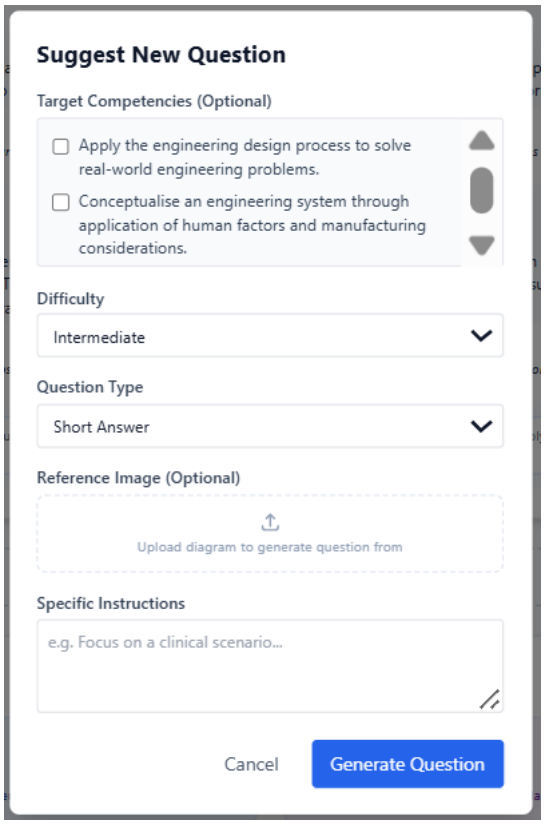

Pro-tip: It is better to test out with 1 each and see which is more preferred. Note that the formatting may be off. Usually, some editing should be able to fix it.

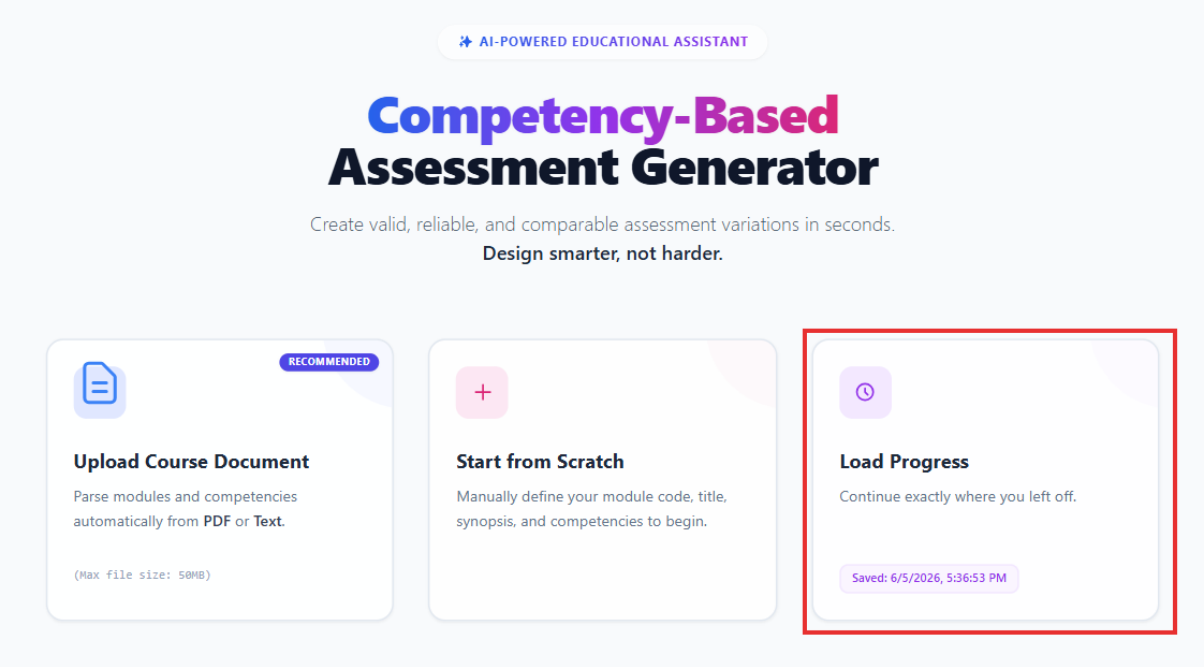

Select the number of variations to generate and click on the “Generate Variations for All Item”.

Pro-tip: If you just want to generate variations for 1 or a few of the generated assessments, click on the checkboxes to select. The default will be to generate variations for all items if no checkbox is ticked.

Pro-tip: If more questions are required (optional), it is possible to click on the + Suggest Another Question above the create Variations. Fill in the following to create new question and click on “Generate Question” button. It is possible to upload an image to create a brand-new question using this method.

Pro-tip: If you want to continue in another session, you can log off. The next time you log in, you can click on the Load Progress button to see your last generated assessment progress. Note that if you clear your cache, the assessment generated will be gone.

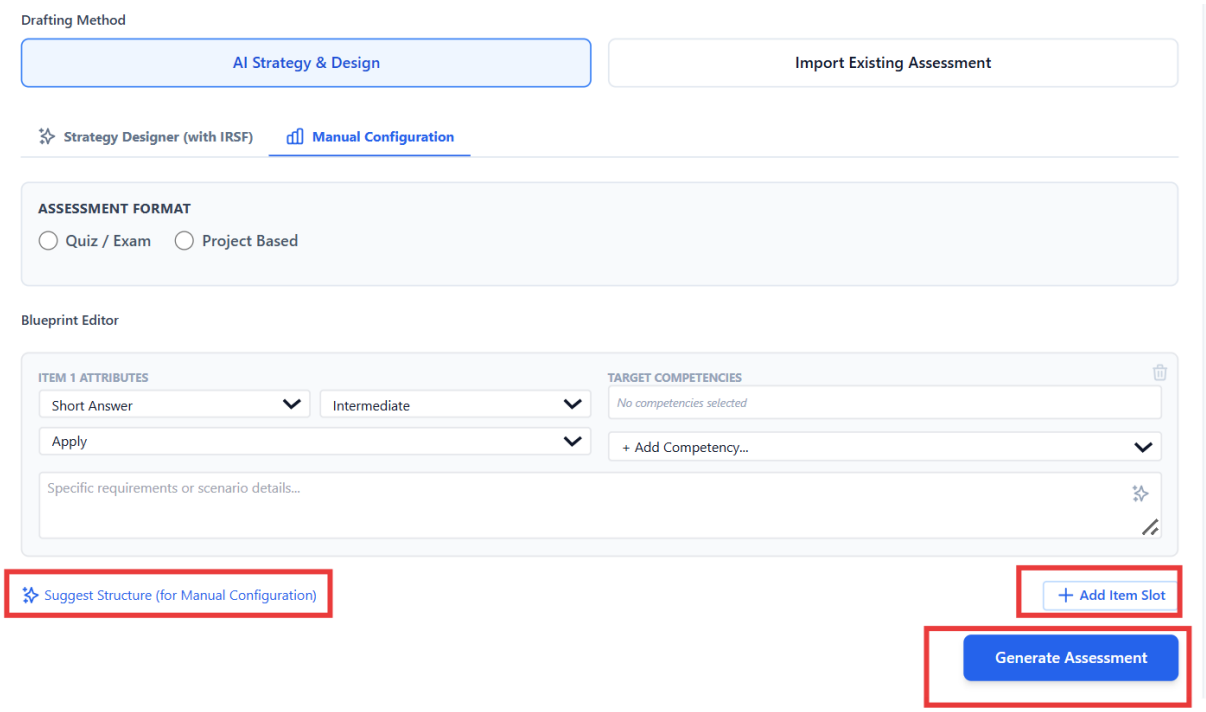

How to use Manual Configuration?

For Manual Configurations. There are a few ways to do it.

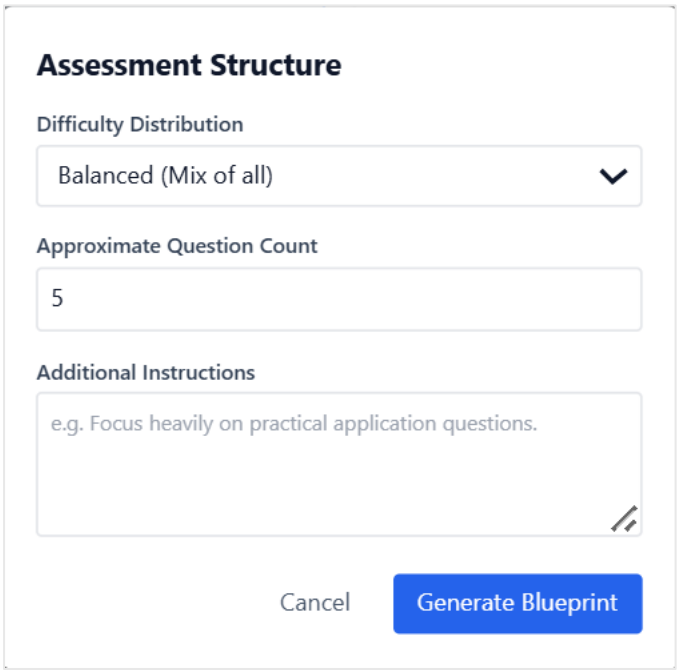

1) It is possible to choose to do 1 item at a time. Then you can click on + Add Item Slot on the bottom right. Fill in the Drop-down options, choosing Question Type (MCQ, Short Answer, Essay and Problem-Solving), the Difficulty Level (Beginner, Intermediate, Advanced), Bloom's Taxonomy level, Competencies of the module

to be used.

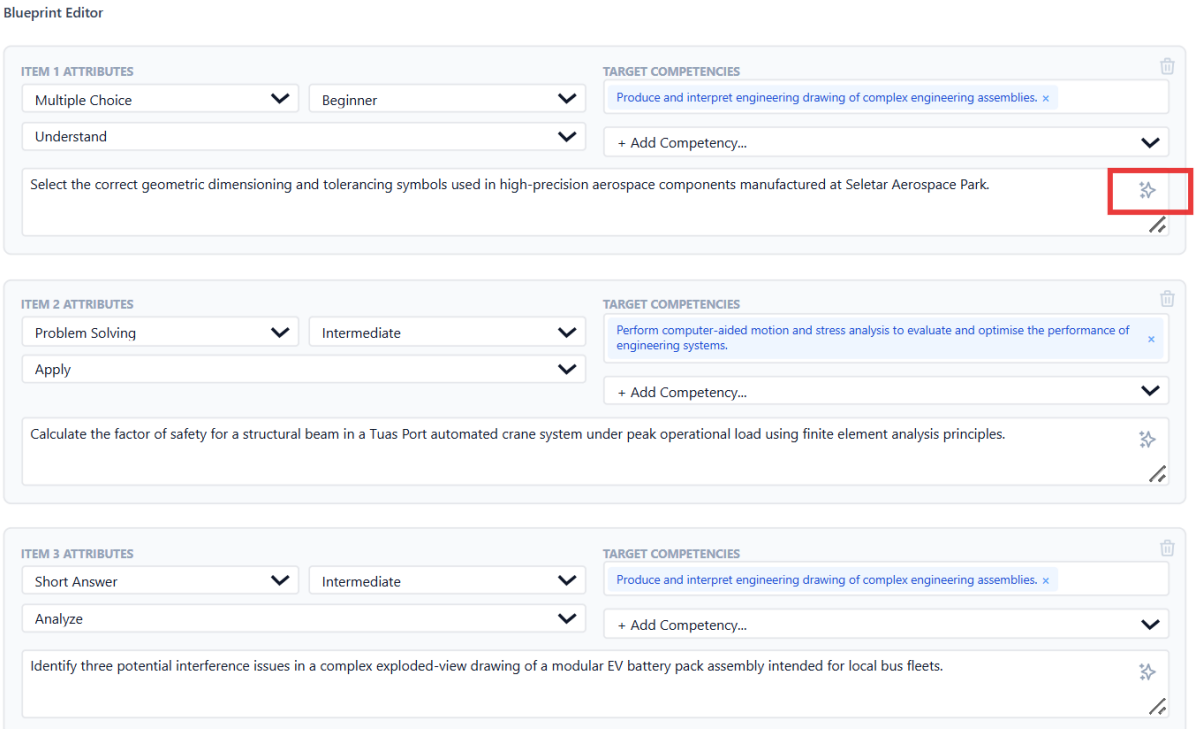

2) It is also possible to get the AI to “Suggest Structure (for Manual Configuration). You can click on the left (see image above).

Then choose the options in the assessment Structure window that pops up. Then fill in the necessary, and click “Generate Blueprint”

Some question types will be suggested by AI, you can click on the magic star to regenerate if necessary.

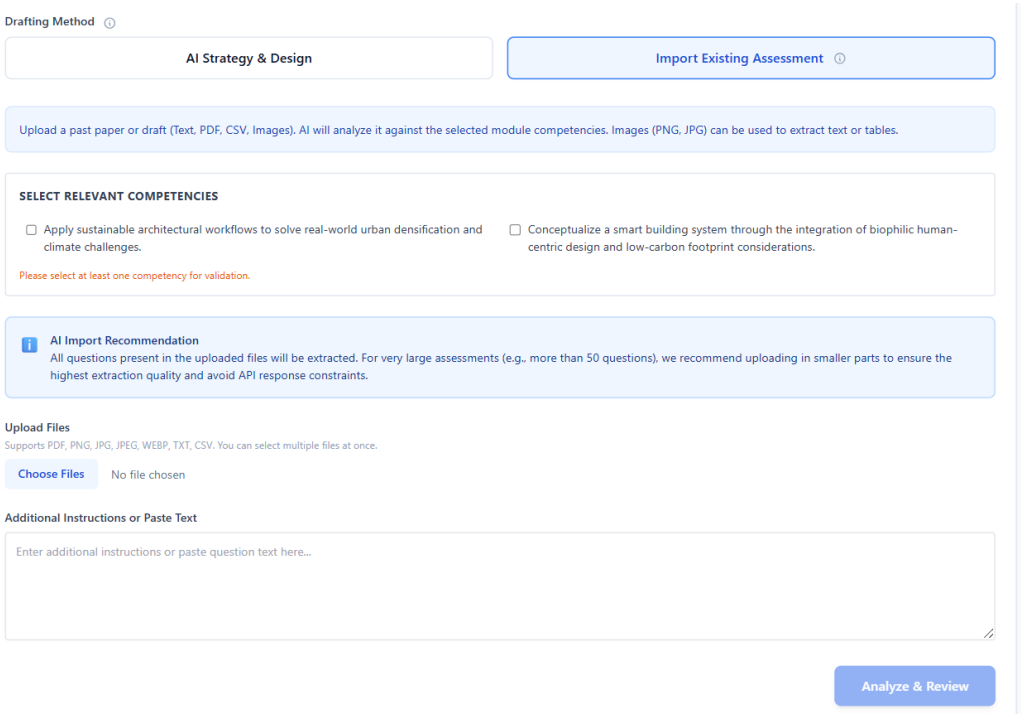

After review, click on Generate Assessment button at the bottom of the page. Then review the questions generated and click on variations to generate more as mentioned earlier. The steps are the same.

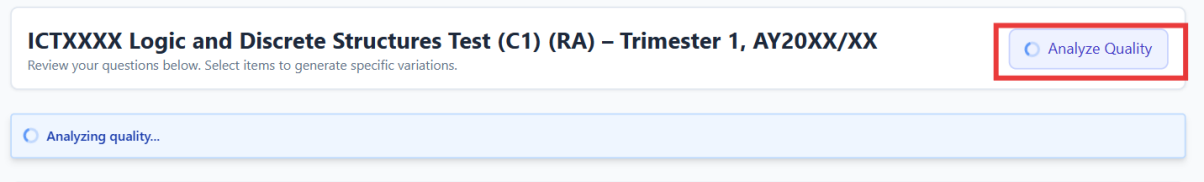

How to use Import Existing Assessment?

If you have an existing assessment, you can use the Import Existing Assessment. Select the relevant competencies your assessment is testing. Next, you can choose to upload your assessment in pdf, or also paste text.
Then click on Analyze & Review.

Pro-tip: It is also possible to put custom prompt in the "Additional Instructions or Paste Text" portion. E.g. extract only the first 3 questions etc.

After the existing assessment has been extracted, it is possible to analyze quality of the assessment based on the selected competencies to get some suggestions on how the assessment is able to test the competency or areas of improvement for consideration. Note that AI generated suggestions may not be error-free, please use your own discretion.

After that, it is possible to edit the questions and choose to generate variations of them.

End of User Guide for AssesssmentAId. 😊
